PowerShell Beginner Cheat Sheet

Getting Started

- **Open PowerShell:** Search "PowerShell" in Start Menu
- **Clear screen:** `Clear-Host` or `cls`
- **Exit PowerShell:** `exit`

File and Folder Navigation

- **Show current location:** `Get-Location` or `pwd`
- **Change directory:** `Set-Location C:\Users` or `cd C:\Users`
- **Go to parent folder:** `cd ..`
- **Go to home folder:** `cd ~`
- **List files and folders:** `Get-ChildItem` or `ls` or `dir`

File Operations

- **Create new file:** `New-Item myfile.txt -ItemType File`
- **Create new folder:** `New-Item MyFolder -ItemType Directory` or `mkdir MyFolder`
- **Copy file:** `Copy-Item file.txt newfile.txt`
- **Copy folder:** `Copy-Item MyFolder NewFolder -Recurse`
- **Move/rename file:** `Move-Item oldname.txt newname.txt`
- **Delete file:** `Remove-Item file.txt`
- **Delete folder:** `Remove-Item MyFolder -Recurse`

Viewing File Contents

- **Display file content:** `Get-Content file.txt` or `cat file.txt`
- **Display first few lines:** `Get-Content file.txt -Head 5`
- **Display last few lines:** `Get-Content file.txt -Tail 5`

Getting Help

- **Get help for a command:** `Get-Help Get-ChildItem`
- **Show command examples:** `Get-Help Get-ChildItem -Examples`

- **List all available commands:** `Get-Command`

Process Management

- **List running processes:** `Get-Process`
- **Stop a process:** `Stop-Process -Name notepad`
- **Start a program:** `Start-Process notepad`

System Information

- **Show computer info:** `Get-ComputerInfo`
- **Show current date/time:** `Get-Date`
- **Show PowerShell version:** `$PSVersionTable`

Text and Output

- **Display text:** `Write-Host "Hello World"`
- **Save output to file:** `Get-Process > processes.txt`
- **Add output to file:** `Get-Date >> log.txt`

Variables (Simple)

- **Create variable:** `$myvar = "Hello"`
- **Use variable:** `Write-Host $myvar`
- **Show all variables:** `Get-Variable`

Tips for Beginners

- Use **Tab** key to auto-complete commands and file names
- Use **Up/Down arrows** to cycle through previous commands
- Commands are not case-sensitive
- Most commands have shorter aliases (like `ls` instead of `Get-ChildItem`)
- Use **Ctrl+C** to cancel a running command

This cheat sheet covers the essential PowerShell commands every beginner should know. Start with navigation and file operations, then gradually explore other areas.
